- **Project Grade:** A
- **Comments from the TA grading your project:**

Outstanding results, nice report and a very high quality of video during your poster presentation! I believe too that you achieved a very high level of understanding of how CNN works, and not only that. Making a GAN work during a course duration is something to celebrate. I would have expected only 2 thing that you didn't discuss: a small analysis on the features obtained by your CNN and a little more of detail on your GAN (for example, did it converge?). Well done anyway!
